

- Before the “CDS”

# HISTORY OF THE COORDINATED DATA SCRAMBLE

ACTIVATIONS ACTIONS IDEAS

Digital support is changing humanitarian response; the Coordinated Data Scramble (CDS) Community of Interest (COI) was created to support the joint search for data.

DH Network  
Digital Humanitarian Network

06

## Old school

HICs

Expensive and poor Internet  
Connections were 1-to-1

Email was standard

Support was time-zone sensitive

09

# Start of the change

Individuals using Skype, but stays 1-to-1  
More & more digital responders entering  
the “IM market”

10

## Haiti EQ

Humanitarian sector wakes up to  
digital volunteers

Disaster Relief 2.0 changes the game

11

# Libya & the crisis map

UN first official digital humanitarian  
request

See duplication in data hunting  
across the humanitarian sector

## Libya & Japan Lesson Learned

Lesson Learned workshop

DH Network established

Communities of Interest initiated  
including CDS

## OCHA IMO Skype group approved

Connections go to groups (vs 1-to-1)  
Support becomes horizontal and  
everyone can support each other

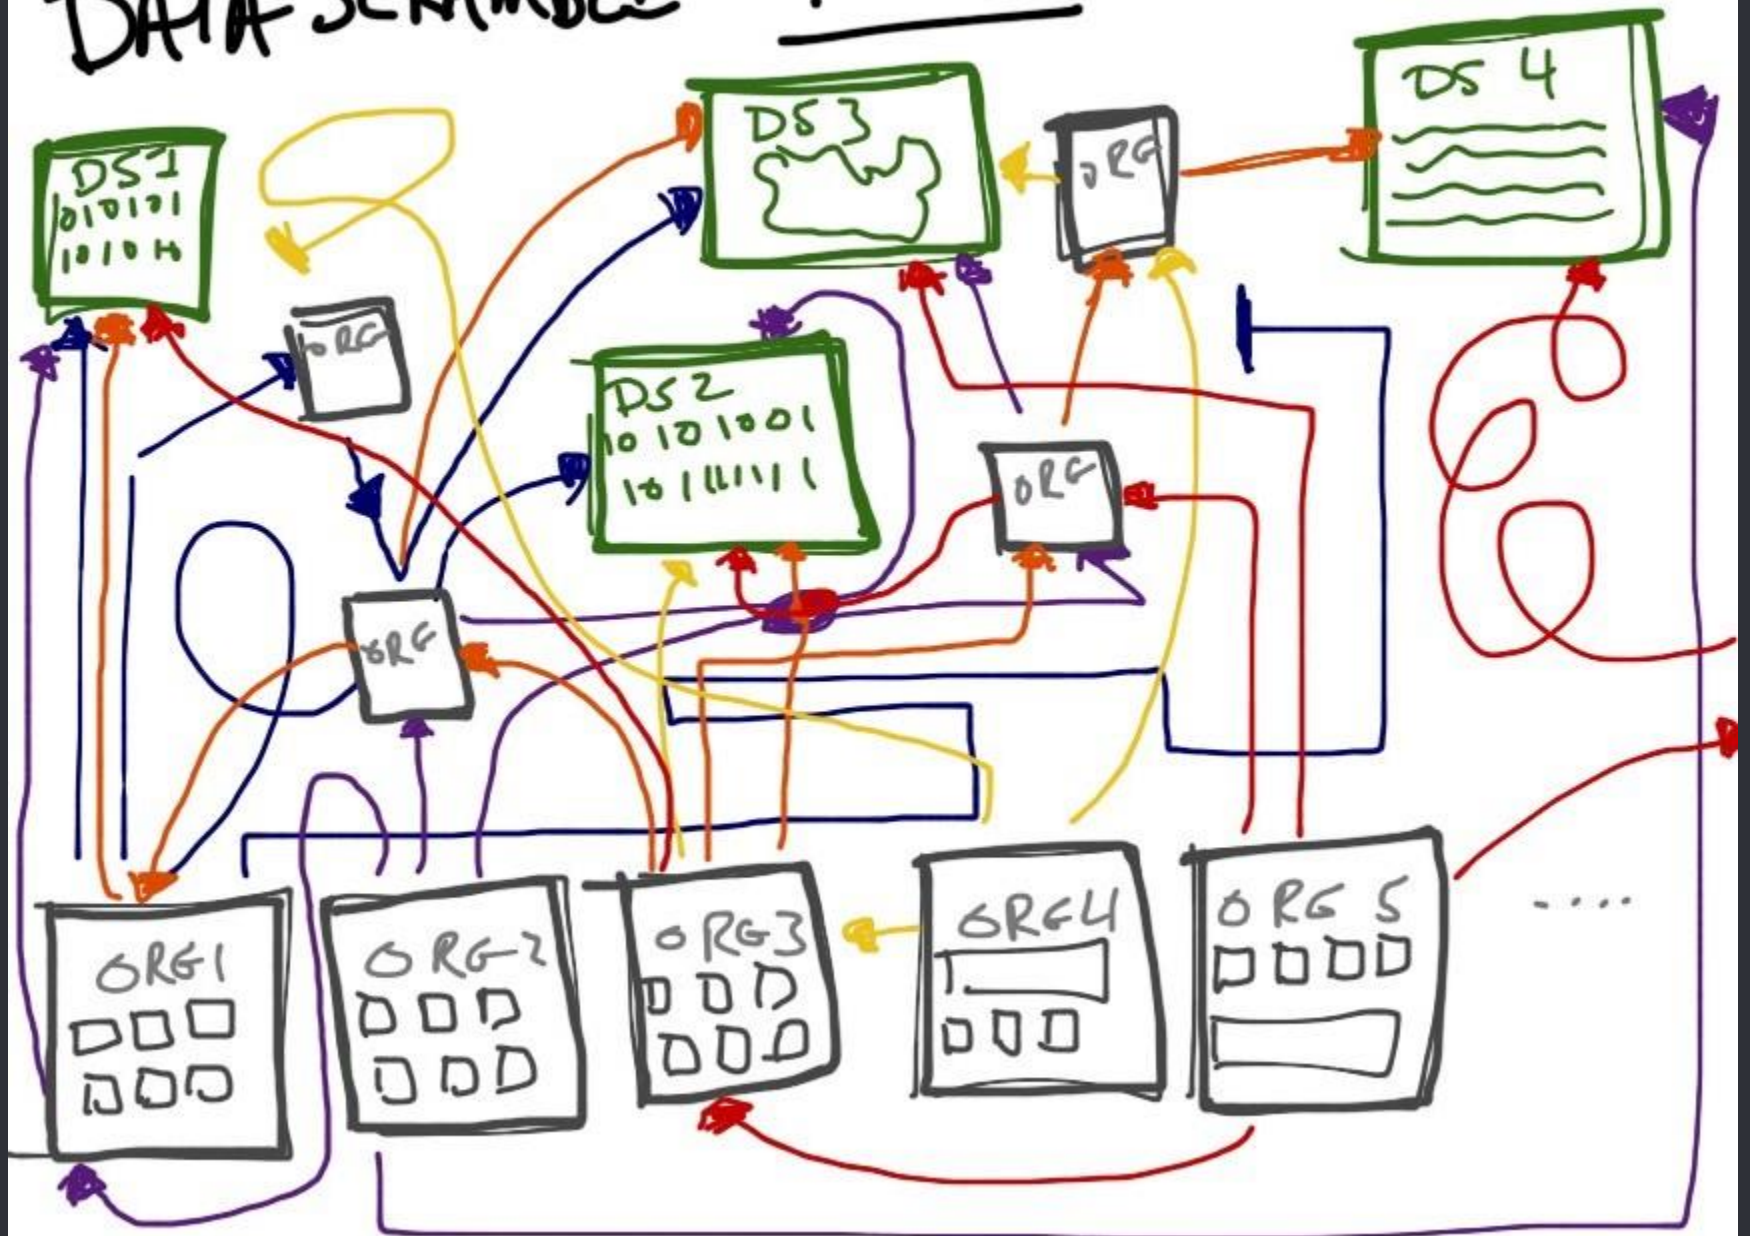

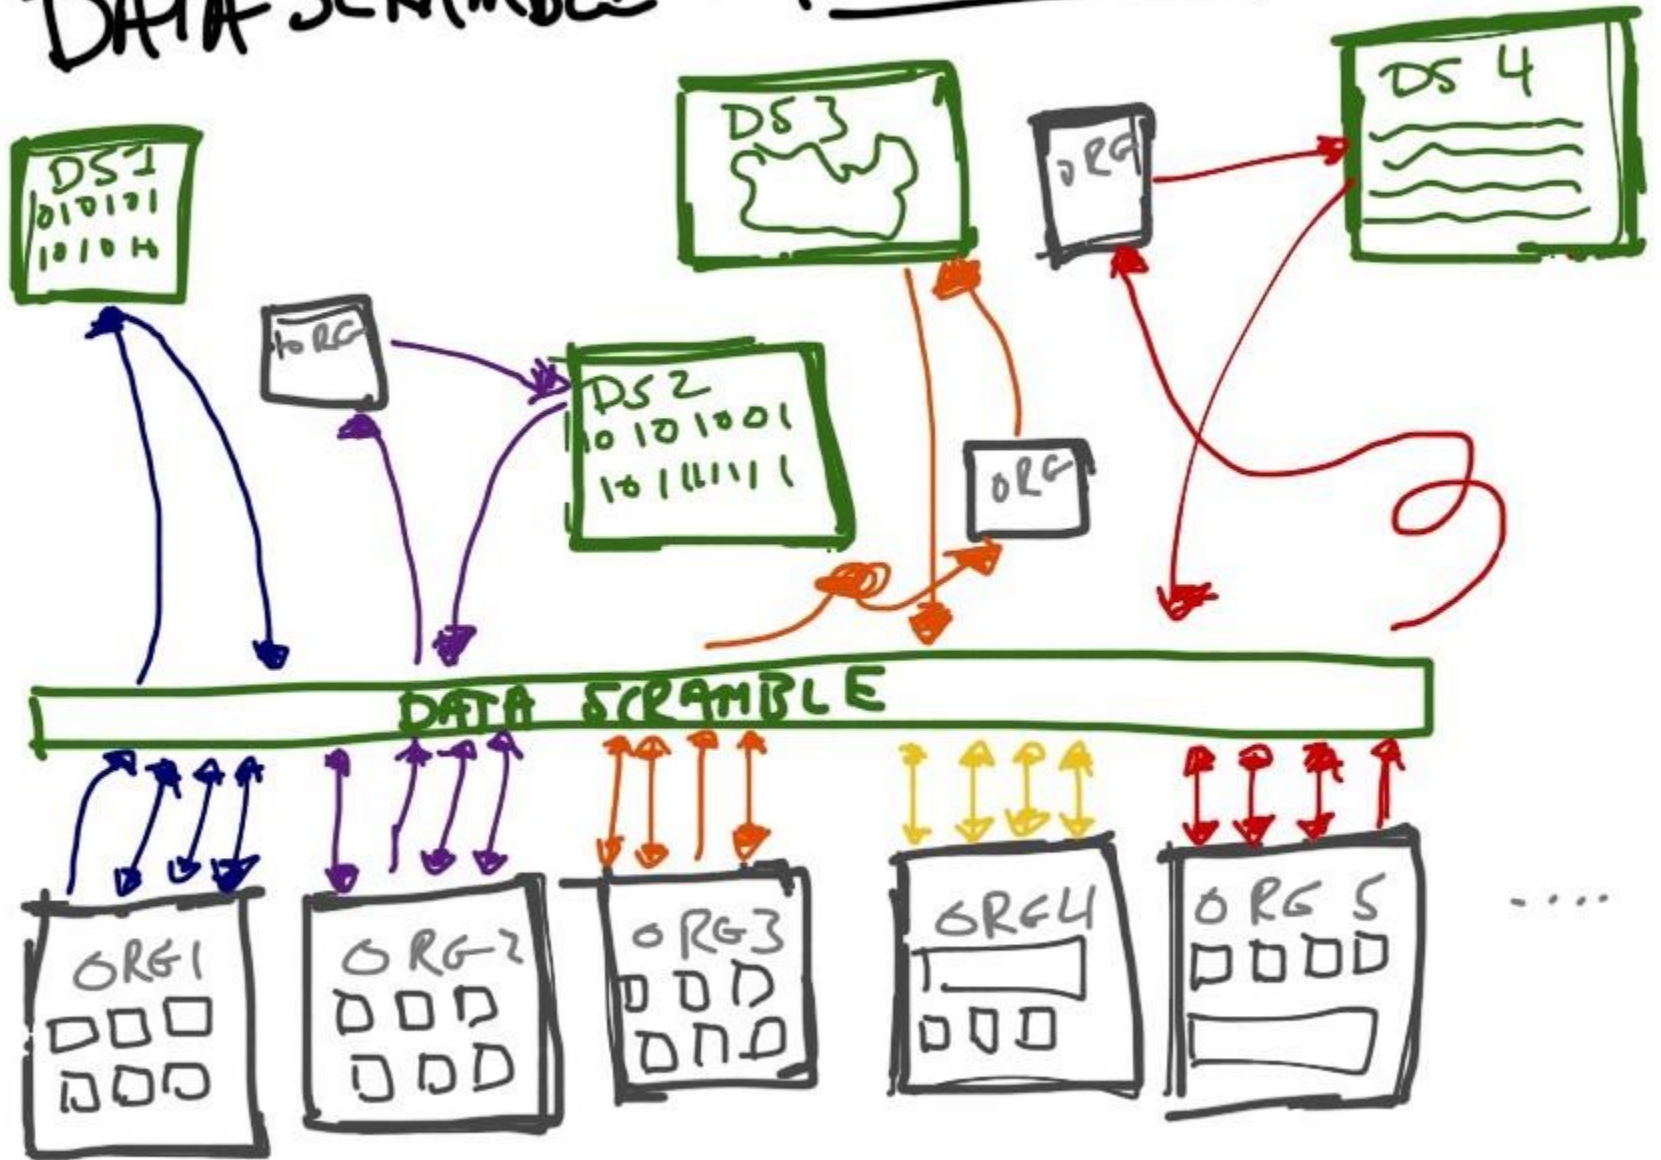

World Bank experience

Lack of CDS in action

Questions for  
today

## Is it hard with more connectivity?

With more connectivity enabling more actors, have we actually made coordination harder?

Has it actually added more noise for those who are trying to get work done?

## How to make it better today?

My question: how do we take the processes of today and have them achieve the same end goal yet make life “quieter” for responders?
