From the Cloud to the Field

What do we use the Cloud for today?

- The first step that needs to be done: data storage!
- THEN you can start thinking of optimised data management and standardisation, as well as WPS (web processing services)...
- It's important to combine the desktop GIS with the Cloud, taking into account the offline field constraints

Knowing how to show the added-value of your GIS

- The tools seem operational today (webmapping, data collection...), it's the processes that need to be improved, to clearly answer the field needs
- Know how to present facts and figures on the added value of the GIS (Return on Investment)

The coordination of actors is essential

- Vertical Coordination : Be careful with the discrepancy between the field data and the more « official » data
- Horizontal Coordination: the question should become « why don't I share? » rather than « why do I share? » → win-win approach for all partners

Les personnes ayant donné de leur temps pour l'organisation

■  Martin Noblecourt

■  Sandra Sudhoff

■  Isabelle Durand

■  Yann Garcin

■  Jean Guy Audéoud

■  Ludovic Boyer

■  Sylvie de Laborderie

■  Rémi Galinier

■  Audrey Lessard-Fontaine

■  Amélie Méchenin

■  Claire Halleux

■  Morgane Lambourg

■  Florent Drouet

■  Fred Moine

■  Clovis Grinand
